Subject: Assessment of the chosen language

Date: September 24, 2020

Since both of us do not have experience in coding before joining Northeastern, we decided to choose Java as our chosen language to complete our assignments for this class. Java is the language we both are most exposed to and familiar with due to our exposure in Fundamentals II and Object-Oriented Design. Overall, our experience with Java has been a pleasant one and we do not have much complaints regarding the language we have chosen for this class.

It was rather easy to learn about the in-built libraries and also look up for external libraries that supported this language in order to successfully complete our assignments. Most libraries we have used had good documentation which helped us explore their capabilities and limitations. There are also many tutorials online by Oracle and other Java developers that provided us with examples and explanations. Whenever we ran into errors, we could also find many solutions online as the language is so widely used. We also used our knowledge from previous courses to assist us in completing our assignments and used them as a base and built upon that knowledge. Other than that, we were definitely also exposed to different parts of the language and IDE in order to deliver our assignments.

In conclusion, we are excited to continue our journey in this class using Java and hope it will also be a pleasant experience going forward without much regrets. Java is a well-known and widely used language which would pose as a great advantage and learning experience for us for our future.
